

The Lapro-Flex® Family of Articulating Retractors

Lapro-Flex® articulating laparoscopic retractors allows for convenient and atraumatic retraction of organs and tissue in the peritoneal space.

The Lapro-Flex® Self-forming Articulating Retractor

These retractors can be introduced through a 5mm cannula and articulated to their shape by rotating a knob in the handle. They are available in several different configurations including right angle, triangular and angled triangular.
